PROFILE

Experienced and self-motivated Full-Stack web developer with two years of industry experience designing and developing websites at a web agency. Adept in implementing my front-end and back-end skills to enhance a company's web team, allowing for amazing products to be created. Knowledgeable about the Git flow and languages like JavaScript, and Python as well as frameworks such as React, Node JS, and Express. Bringing forth a proven track record of successful projects as well as my training received by Lambda School.

EMPLOYMENT HISTORY

Front-End Engineer , ATL Solutions, Remote

NOVEMBER 2018 — FEBRUARY 2020

- Worked well independently and on a team to solve problems.
- Organized and prioritized work to complete assignments in a timely, efficient manner.
- Served as a friendly, hardworking, and punctual employee.

Full Stack Web Developer, Freelance, Remote

FEBRUARY 2020 — PRESENT

- Designed frameworks for UX /UI focused applications.
- Provided React relevant skills to implement new features in software.
- Brought forth a strong understanding of research methods and data analysis.

EDUCATION

Full-Stack Web Development, Lambda School, Remote

FEBRUARY 2020 — NOVEMBER 2020

At Lambda we are taught a wide variety of technology stacks that enable us to feel comfortable with any frameworks or workflows. We worked with teams from different curriculum's like IOS developers and students from the Data Science curriculum, to create full-stack applications.

SKILLS

HTML

CSS

JavaScript	React
Node Js	Python
SQL	Adobe Creative Suite
Graphic Design	GitHub

PROJECTS

Wunderlist

Wunderlist was a full-stack project made by a team at Lambda School. My role in this project was to create the marketing pages using HTML and CSS. I also used the Less for the styling organization.

Todo Or Not

Todo Or Not was a fun little project creating a todo list. This was designed and developed by me. I used the React framework and JS language to create this application.

Project Link: https://react-todo-j1boehfwg.now.sh/

Oxygen

Oxygen is a plant watering system that allows users to register and login to their own dashboard and add a plant that is in their garden and implement watering frequencies for each of their plants and save them to their dashboard. My role in this project was the lead Front-End developer. React was used to create the front end portion of this application.

QuizBee

QuizBee is a react app that calls to. a random questions generator API and allows the user to answer the questions and upon completion of answering the questions will show the user their score along with a "play again" button. I designed and developed this app.
